This sequence is the direct result of the Base calling software
Phred (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [122,733].

Human enterovirus B isolate NSW/197/99 5' UTR, partial sequence.
AY189203
                                                                                                                                 Human enterovirus 71
Viruses; ssRNA positive-strand viruses, no DNA stage;
Picornaviridae; Enterovirus.
1 (bases 1to 116)
Craig, M.E., Howard, N.J., Silink, M. and Rawlinson, W.D.
Reduced Frequency of HLA DRB1*03-DQB1*02 in Children with Type Diabetes Associated with Enterovirus RNA
J. Infect. Dis. 187 (10), 1562-1570 (2003)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Enterovirus 5536/SIN/001409
Enterovirus 5536/SIN/001409
Viruses; seRMA positive-strand viruses, no DNA stage;
Picornaviridae; Enterovirus.

1 (bases 1 to 154)
Singh,S., Chow,V.T.K., Phoon,M.C., Chan,K.P. and Poh,C.L.
Direct Detection of Enterovirus 71 (EV71) in Clinical Specimens from a Hand, Foot, and Mouth Disease Outbreak in Singapore by Reverse Transcription-PCR with Universal Enterovirus and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (13.-FEB-2001) Microbiology, National University o Singapore, 5 Science Drive 2, Singapore 117597, Singapore Sequence update by submitter on Feb 23, 2001 this sequence version replaced gi:12667230.
